鞍山新福源设备有限公司

Anshan Newfoton Machinery Co., Ltd

Tel: +86(412)7105527 7224715

回转产品研发专家
特种领域拓展先锋
科技创新领先者

*Expert of slew product
Pioneer of special application
Leader of innovation*

鞍山新福源设备有限公司为新福田集团的下属独立企业。成立于1996年,专业从事回转产品的研发、设计、生产、检测以及维修。旗下拥有回转支承(90mm-8000mm)和回转驱动2大系列产品。在多年的专业化生产实践中,公司拥有一支成熟的专业化队伍,积累了丰富的经验,积极推动回转支承及回转驱动在特殊领域的应用,并取得了显著成果,NFB品牌已在国内外的应用赢得良好的口碑。

NFB回转支承和回转驱动的显著特点如下:防水,防尘,防风沙;耐热,耐寒,耐腐蚀;精密,分体,高承载。特殊要求,特殊设计,特殊定制。

产品主要应用于军工和新能源开发、医疗设备,环保水下设备,高精度生产线,海上平台,近海设备,矿山机械、旋转输送装置、冶金机械、航空航天等特种领域。

企业在保证并提升产品质量的同时,不断研发新产品、提高产品档次以满足快速扩大的市场需求。企业的主旨是全力打造NFB品牌,持续追求顾客、企业、员工及其利益相关者共赢,成为国内著名、国际上有影响力的回转支承制造厂家。

Anshan Newfoton Machinery Co., Ltd is one independent subsidiary of Newfoton Group Limited, which is a professional company engaged in research and development, design, manufacture, inspection and repair of slewing products for 20 years. Our main products are slewing ring from 90mm to 8000mm and slew drive. For many years professional production, Newfoton owns a professional team, accumulates rich experience to produce slewing ring and slew drive for special field, and promote application in special field. Now NFB brand gains a good reputation.

NFB brand excellent advantages: waterproof, dustproof, sand-proof; heat-resisting, cold-resisting corrosion-resisting; High precision, Splitting, high loading; special requirement, special design, special customization.

NFB slewing ring and slew drive can be used in many special field, such as war industry, new energy development field, Environmental protection underwater equipment, harbor machinery, mining machinery, rotating conveyer device, metallurgical machinery, aviation, filling machine, medical equipment and so on.

We will assure the product quality when we are enlarging industrial scale, researching and developing new products and improving product level to meet the market demand. Our main goal is to build "NFB" brand and make all of the customers, enterprise and employees obtain benefits to be a famous slewing ring manufacture in home and abroad.

四点接触球法兰式

应用案例 Application Show

Slewing rings used in offshore and underwater equipments require high safety, good anti-corrosion, sealing properties as well as high loading capacity, higher reliability. NFB slewing ring enjoy high reputation in applications due to their consistent high efficiency and reliability.

近海设备和水下用回转支承要具有很高的安全性和很好的防腐性、密封性、高承载能力、高可靠性。NFB 回转支承以其卓越的性能赢得了美誉。

冶金与矿山机械的工作环境恶劣，温度高，粉尘大，回转支承承受的载荷大。NFB 三排滚柱式、球柱联合式回转支承可以在这种情况下很好地工作。

Metallurgical and mining equipments are characterized by their tough working conditions, like high temperature and heavy dust, required slewing rings with high load capacity. Three-row roller and the roller & ball combination slewing rings can work very well in these conditions.

Construction and function of a Slewing Ring

Slewing Rings consist of an internal or external ring (1) and (2) with an integrated raceway system and optional internal or external gear (3). A functional seal (4) protects the raceway system on the upper and lower sides. Slewing Rings are designed for grease lubrication which is carried out via grease nipples (5). In Slewing Rings, the rolling elements (6) carry the loads between the inner and outer ring. The load capacity of the raceway system is determined predominantly by the raceway design, the hardening depth, and the number and size of the rolling elements. Spacers (7) separate the rolling elements and minimize friction and wear. The rolling elements are inserted during manufacture through the filling plug hole (8), retained by the filling plug which is then secured by a pin (9). The force is transmitted to the mounting structure by bolts. Through holes or threaded holes (10) can be provided in the inner and outer rings for these bolts.

回转支承的功能结构

回转支承由带滚道的，内齿或外齿（3）的内圈（1）和外圈（2）组成。一个功能性的密封条（4）保护滚道系统的上下面。回转支承通过注油孔（5）进行油脂润滑.在回转支承内部，滚动体（6）承受内圈与外圈之间的载荷。滚道系统的承载能力主要取决于滚道的设计、硬化层深度、滚动体的数量和尺寸。隔离块（7）使滚动体分开来减少摩擦与损坏。滚动体在生产过程中通过安装堵的孔（8）装入，然后装上堵用销（9）把堵固定住。通过螺栓传送到安装结构。内外圈为螺栓提供通孔或螺纹孔（10）。

1 和 2

内圈与外圈

轴承由中碳钢的内外圈组成。每个包含最少一个从机器的一个结构转移载荷和相对运动到其他结构的精确滚道，滚道有选择地根据在机器操作中传送的压力程度进行表面和深度硬化。在滚道圆周的某个位置有一个不需要硬化的区域叫硬化间隙或软带。这个区域被减轻到承受由滚动体施加给它的最小压力。只有每个圈的一个面制造成紧密配合支承结构。一个或两个圈可能包含一个完整的驱动装置如：齿轮或链轮齿使机器有优势克服转动阻力和通过轴承提供相对运动。

3

齿轮

能提供作为内圈或外圈的一个构成部分的齿轮的回转支承。根据齿侧间隙规定和中国齿轮制造协会质量标准，他们一般是标准的最大深度或短齿渐开线带20度压力角的正齿。根据要求也可以修改基本齿形，压力角和质量。为了装配，齿跳动的最大点可以做标记用于识别。根据要求也可用其他方式。

4

密封条

为了保留润滑油和防尘或小的颗粒污染物，回转支承每个面都要用密封条。合成橡胶材质的密封条一般适合于用矿物油和锂基脂或钙增稠剂润滑油。如果要求用特殊的密封条，新田轴承能根据要求提供详细信息。

5

润滑油嘴

回转支承至少提供一个油嘴用于滚道和内部零部件的定期润滑。在有齿轮结构设计上，它经常在没有齿的圈上。它的数量一般根据轴承的直径增加。或多或少根据要求决定。

6

滚动体

精确的滚动体能在内外圈之间进行相对旋转和传送载荷。硬化的铬合金钢球或滚柱可作为滚动体。他们按照预应力合适地排列和紧密地配合在轴承圈间提供均部载荷并减小转动阻力。

7

隔离块

隔离块使滚动体分开并在旋转过程中减小摩擦、滑动和堵塞。载荷的分布和扭曲安装结构与轴承在机器的操作中会产生这些情况。隔离块一般用与典型油脂和操作环境不矛盾的塑料材质制造。

8 和 9

塞堵 圆锥销

滚动体从没有齿的圈上钻的孔中塞入回转支承，然后放上塞堵。塞堵用一个圆锥销在合适的位置固定住。

10

安装孔

理想的孔类型是通孔均匀的分布在轴承圈的整个圆周上。由于装配或维护的原因不是所有的机器设计都能与这种类型的孔一致，可能会要求用螺纹孔甚至是特别的螺栓类型在一个或所有圈上。

1 & 2

INNER AND OUTER RINGS

The bearing consists of an inner and outer ring made of medium carbon steel. Such as: 42CrMo, 50Mn, C45 and so on. Each includes at least one precision raceway arranged to transfer loads and relative motion from one structure of equipment to the other, the raceways are selectively hardened to the required surface and depth necessary to transit high stresses imposed during operation of the equipment. In one location around the raceway, there is an unhardened area referred to as the hardness gap or soft spot. This area is relieved to minimize the ability of the rolling element to apply stress on it. Only one side of each ring is manufactured to be mated with the supporting structure. One or both rings may include an integral drive mechanism such as gear or sprocket teeth to enable the mechanical advantage necessary to overcome rotational resistance and provide relative motion through the bearing.

3

GEAR

Slewing ring can be supplied with gear teeth as an integral part of either the inner or outer ring. They are typically a standard full depth or stub involute spur gear having a 20° pressure angle with provision for backlash and confirming to AGMA Q6 quality. However, where required, modifications of the basic tooth forms, pressure angels, and quality can be provided. For assembly purposes, the maximum point of gear runout is identified with paint. Alternative methods may be applied upon request.

4

SEALS

A seal is included on each side of slewing ring for retention of lubricant and protection of the bearing from dust and small particle contamination. The seals are made of an elastomer material compatible with most general purpose lubricants having mineral oil and greases using lithium or calcium thickeners. If conditions require different sealing, NBF can provide details of additional options upon request.

5

GREASE NIPPLE

At least one grease nipple is supplied in one of the slewing ring for periodic lubrication of the raceway and internal components. On designs with integral gear teeth, it is located in non-gear ring. The number supplied typically increases with bearing diameter. More or less may be included upon request.

6

ROLLING ELEMENT

Precision rolling elements enable relative rotation and transmit load between the inner and outer rings. Hardened chrome alloy steel balls or rollers may serve as the rolling elements. They are sized appropriately for the anticipated stresses and closely matched to provide uniform load distribution between the rings and minimize rotational resistance.

7

SPACERS

Spacers separate the rolling elements and are designed to minimize friction, skidding, and jamming during rotation. These conditions occur as a result of load distribution and distortion of the mounting structures and bearing rings during operation of the equipment. Spacers are generally made of a plastic material compatible with typical lubricants and operating environments.

8 & 9

FILLING PLUG AND PIN

The rolling elements in slewing rings may be inserted through a hole drilled radially through the non-gear ring and then plugged. The plug is retained mechanically with a pin to assure proper orientation is maintained.

10

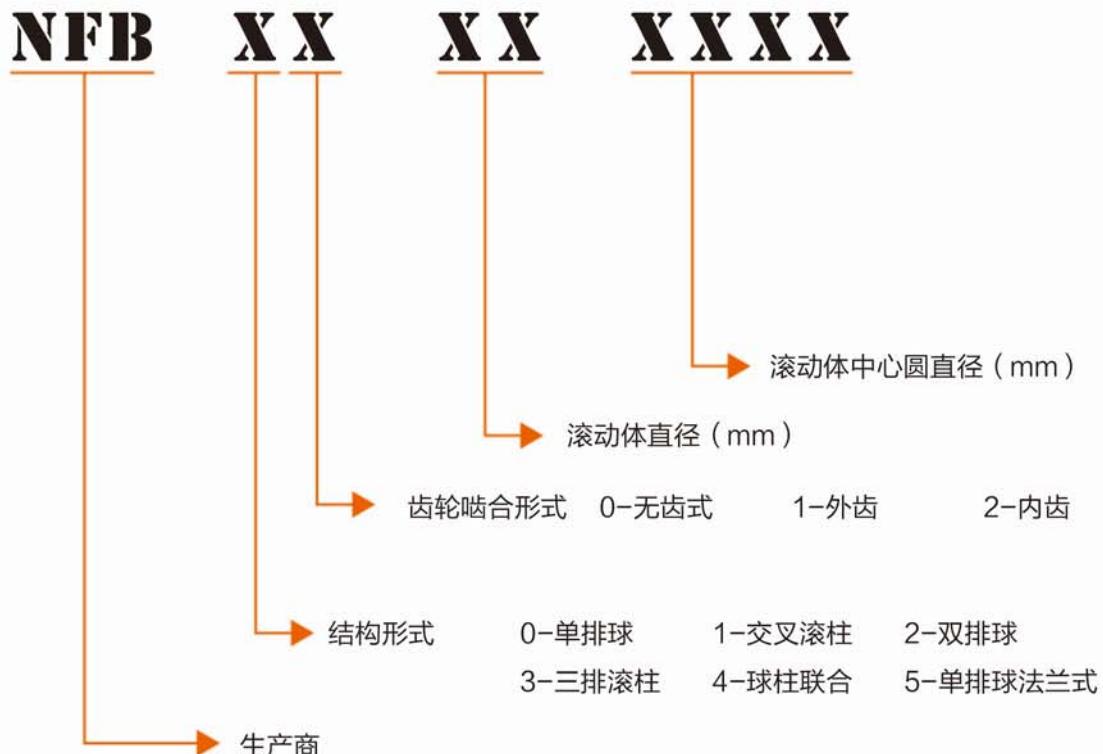

MOUNTING HOLES

The ideal hole pattern for attaching both rings of the slewing ring is a full circle of uniformly spaced through holes. It is recognized, however, that the equipment designer cannot always accommodate this type of arrangement and may require tapped holes and even special bolt patterns in one or both rings for assembly and maintenance reasons.

回转支承型号的表示方法

符号和解释

以滚动体中心圆直径、滚动体直径、齿轮形式等内容来表示轴承型号的方法：

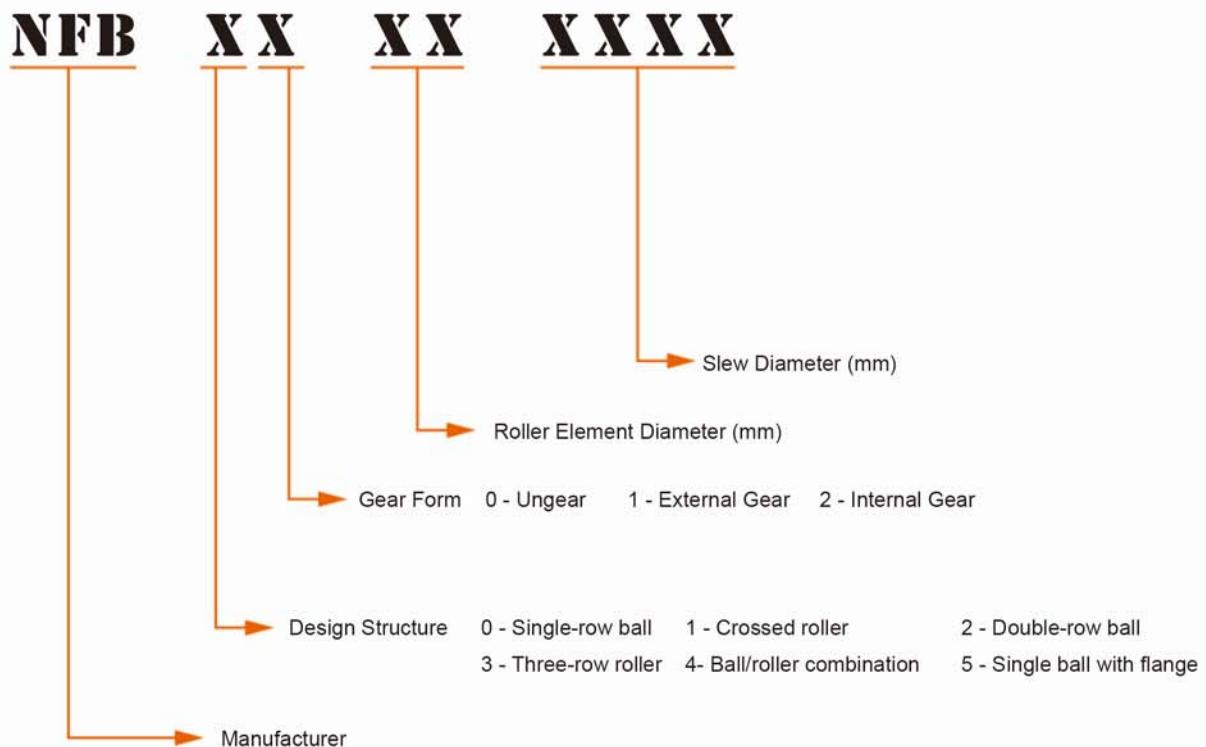

如：NFB 51.20.0755即表示滚动体中心圆直径为755mm，球直径为20mm的外齿带法兰四点球式轴承

符号	解释	单位
Da	外圈外径 (含法兰)	mm
Di	内圈内径	mm
H	轴承总高	mm
h, h1, h2	单圈高	mm
b	法兰高	mm
B	外圈外径 (不含法兰)	mm
U	外圈内径	mm
C	内圈外径	mm
D	内圈内径 (不含法兰)	mm
La	外圈螺栓孔直径	mm
na	外圈螺栓孔数	mm
Li	内圈螺栓孔直径	mm
ni	内圈螺栓孔数	mm
dB	安装孔直径	mm
Hb	螺纹长度	mm
Do	分度圆直径	mm
α	压力角	°
M	模数	--
z	齿数	--

SLEWING RING DESIGNATION

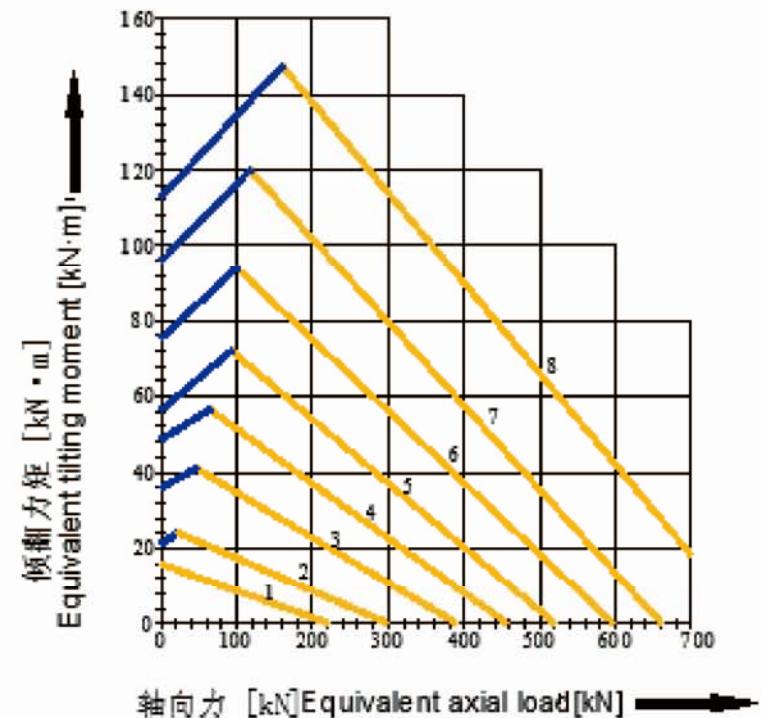

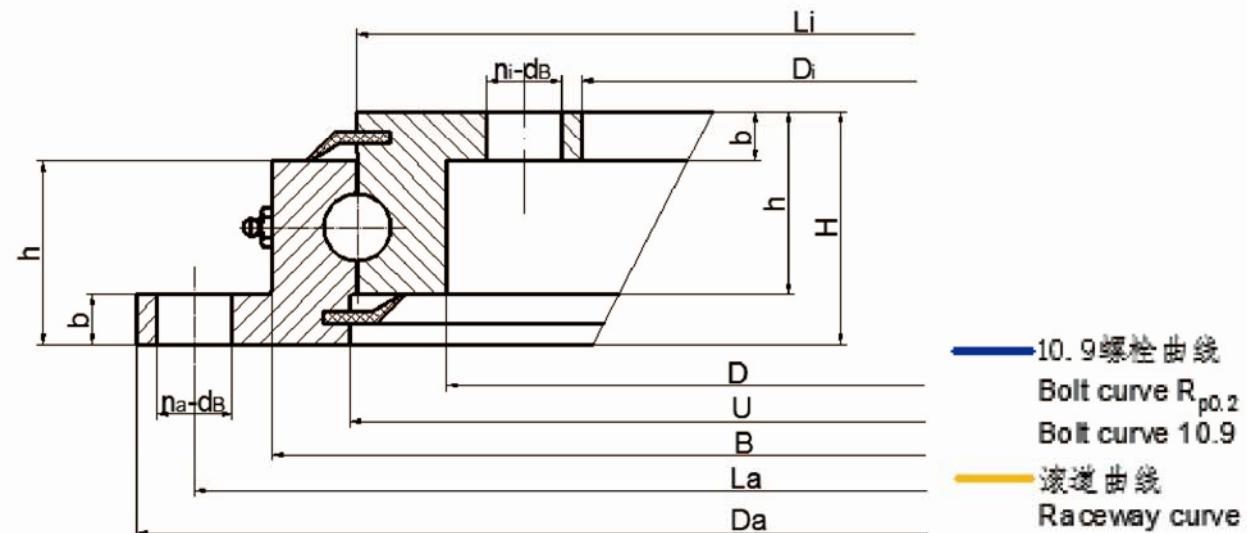

The drawing number contains a description of slewing diameter, roller diameter, gear form and so on.

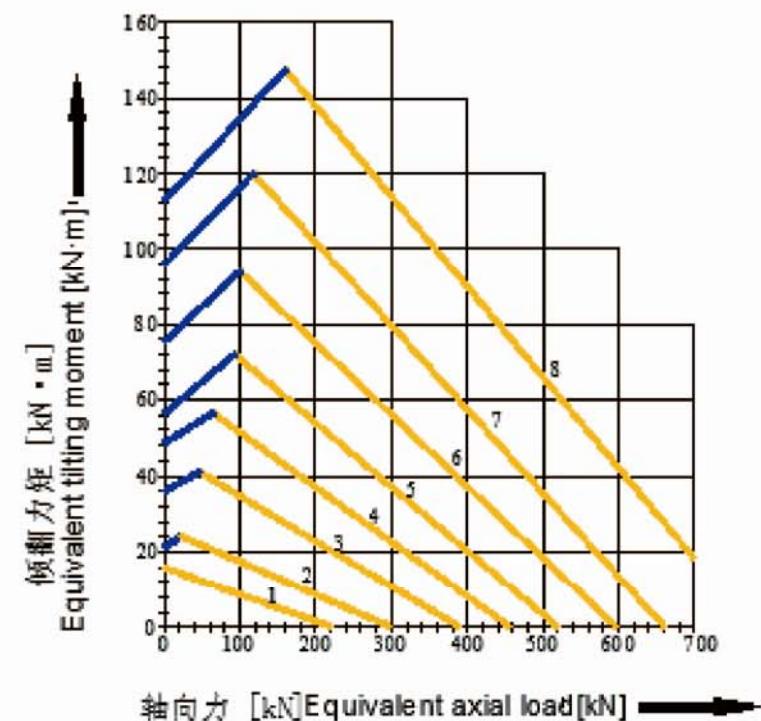

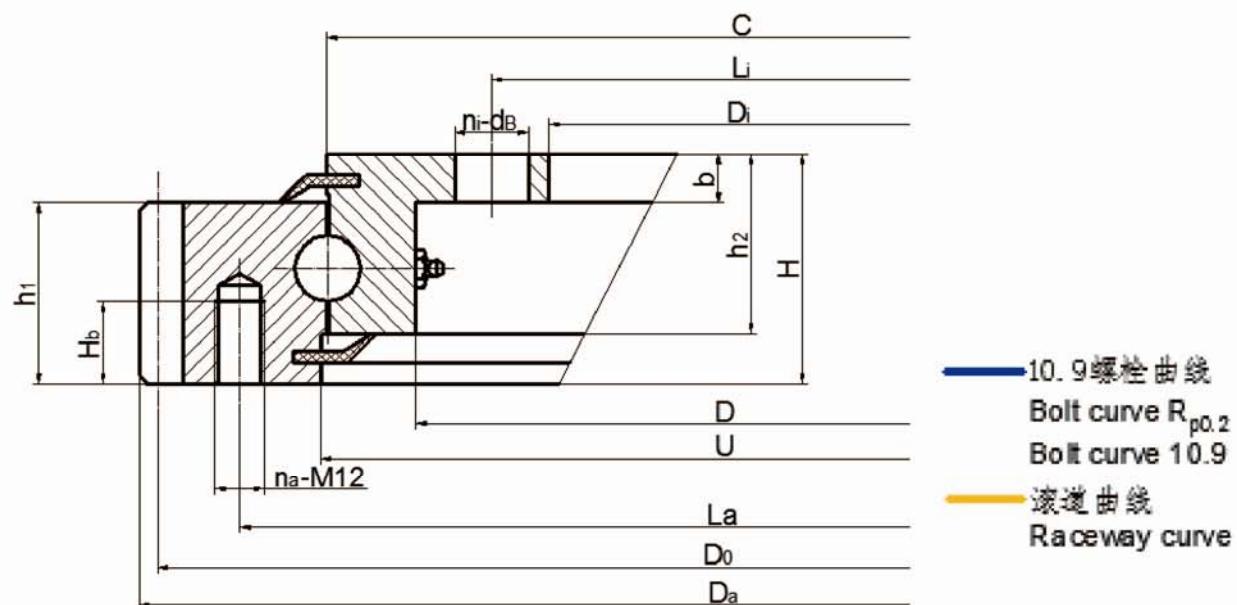

For Example: NFB 51.20.0755 symbolizes a flanged ball slewing ring with external gear, slewing diameter is 755 and ball diameter is 20mm.

SYMBOL & EXPLANATION

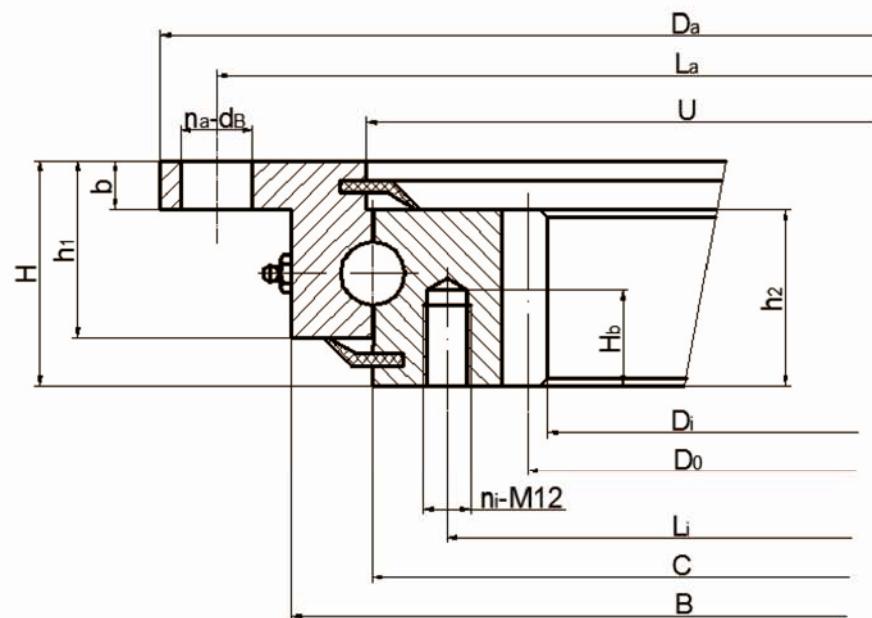

SYMBOL	EXPLANATION	UNITS
Da	Outside diameter of outer ring	mm
Di	Inside diameter of inner ring	mm
H	Height of overall bearing assembly	mm
h, h1, h2	Height of ring	mm
b	Height of flange	mm
B	External diameter on outer ring	mm
U	Inside diameter of outer ring	mm
C	Outside diameter of inner ring	mm
D	Internal diameter on outer ring	mm
La	Bolt circle on outer ring	mm
na	Number holes in outer ring	mm
Li	Bolt circle on inner ring	mm
ni	Number holes in inner ring	mm
dB	Mounting holes diameter	mm
Hb	Thread depth	mm
Do	Pitch diameter	mm
α	Pressure angle	°
M	Module	--
z	Number of teeth	--
